

Care Legend

CC	Crown Cleaning shall consist of the selective removal of one or more of the following items: dead, dying or diseased branches, weak branches and watersprouts.
CR	Crown Raising to provide clearance.
CT	Crown Thinning shall consist of the selective removal of branches to increase light penetration, air movement and /or to reduce weight.
HR	Hazzard Reduction is recommended when the primary objective is to reduce the danger to a specific target, such as unstable limbs that could cause damage should be removed.
NAR	No Action Recommended
Removal	Tree removal recommended due to structural instability

* Trees calibers are measured in diameter at breast height. (DBH)

PLEASE NOTE: that at the time job specifications are written all the trees on a property are not necessarily examined. Trees cover over their injuries as part of their normal life cycle; therefore, not all defects can be visibly defined. There is also no guaranty that a tree's condition will not change over a very short time due to weather, disease and/or environmental conditions. Not all risk can be eliminated. There is risk associated with simply standing under any tree; therefore, tolerable risk levels can only be determined by the client. This document is not a "Tree Risk Assessment". This service is only available from ISA Certified Arborists who hold a "Tree Risk Assessment Qualification".

******* Fertilization is recommended for all trees to receive proper nutrition annually to maintain the health of the tree.
